

Patient Logs:

Note: Other use cases of this project are as follows:

- Online Registration.
- Customer Onboarding.
- Volunteer Management.
- Job Application Tracking.
- Membership Management.
- Survey Response Management.

Purpose: The purpose of this project is to implementation of a Salesforce solution aimed at automating the appointment form process by enabling online form submission and instant account creation. Since up till now the hospital is keeping all data/logs in the form of paper work.

Requirements: The requirement of the project are:

- Easy to use interface since the team who is going to use are not familiar with salesforce.
- The record should contain list of information that is given by the hospital.
- Develop an online appointment form.
- Keep all the information saved at one place that is easy to access.
- Enable real-time creation of user accounts upon form submission.
- Streamline front desk operations by automating the entry of additional details such as fees, prescription, and other relevant information.
- It should also save the hand written prescription in the form of image or pdf which can be viewed without downloading.
- Home page that will show information such as number of patients visited to the hospital and total amount collected daily as well monthly by the hospital.

Below is the link of the appointment form.
